**IPAC** is a unique process of treatment and disinfestations. It allows the protection, conservation and storage of art without damage as the Process is completely safe for humans and the environment.

This high-tech treatment process uses an inert and neutral gas.

To treat the art objects we place them into flexible bags and modify the atmospheric conditions.

The bags are gas proof and made-to-measure.

The Process prevents any deterioration of the art object.

### The Process :

The treatment is a curative process used for all kinds of fine art eradicating insects.

The disinfestations are done by replacing the oxygen with an inert and neutral gas hence the insects will be killed by anoxia. The process is completely safe for the art object, keeping their fine molecular structure intact.

### The Duration:

The normal duration of the treatment is 3 weeks at 21°C. However, with the use of our new technology, this duration can be dramatically decreased to a few days.

### Storage & Preservation:

After the treatment period, the art object can be stored in the treatment bag for long term preservation.

Treatment and Storage of Jalbut, Sharjah Maritime Museum, SHJ

If the bag does not need to be opened immediately, it offers an ideal environment to store the object in for long periods of time.

### Benefits of Storage:

By not opening the bag and using it to store the art, we assure:

- Pure environment,
- No re-infestation
- No deterioration due to insects, moisture, mould, etc.
- Complete protection against floods, water damage & dust
- Ideal storage in any conditions.

Adopted by numerous museums in Europe and the Middle East, **IPAC** is recognised by different public and private organisations.

The process which has been designed and fine-tuned by IPAC has undergone vigorous laboratory tests to provide the kind of preservation we can offer today.

### Applications of IPAC

**IPAC's** services can be used to preserve, transport and protect:

*Paintings, sculptures, books, manuscripts, furniture, carpet, tapestry, archives, textiles...*
